

Domain 1: Cloud Concepts (24%)

Task Statement 1.1 — Define the benefits of the AWS Cloud

Knowledge of:

- AWS Cloud value proposition
- Benefits of cloud computing (Agility, Elasticity, Scalability, Reliability, Security, Global Reach)
- AWS global infrastructure (Regions, Availability Zones, Edge Locations, Local Zones, Outposts)
- Economies of scale and cost savings
- Shared responsibility model (high-level idea)
- How AWS enables innovation and digital transformation

Skills in:

- Explaining the AWS Cloud benefits compared to traditional data centers
 - Identifying advantages of the AWS global infrastructure
 - Describing elasticity and scalability
 - Explaining pay-as-you-go pricing
-

Task Statement 1.2 — Identify design principles of the AWS Cloud

Knowledge of:

- The **6 design principles** of the AWS Well-Architected Framework:
 1. Design for failure
 2. Implement elasticity
 3. Leverage managed services
 4. Automate everything
 5. Think parallel
 6. Stop guessing capacity needs
- Core concepts of **high availability** and **fault tolerance**

Skills in:

- Recognizing best practices for building reliable and cost-effective cloud architectures
 - Identifying when to use multi-AZ or multi-Region designs
-

Task Statement 1.3 — Explain the economics of cloud computing

Knowledge of:

- CapEx vs OpEx

- AWS pricing fundamentals:
 - Pay-as-you-go
 - Save when you reserve
 - Pay less by using more
- Total Cost of Ownership (TCO)
- AWS Pricing Calculator and Simple Monthly Calculator
- Cost optimization methods (Auto Scaling, right-sizing, Spot Instances)

Skills in:

- Understanding how AWS helps lower costs
- Explaining the benefit of elasticity for cost savings
- Selecting cost-effective resources

Task Statement 1.4 — Define different types of cloud computing models

Knowledge of:

- **Deployment Models:**
 - Public Cloud
 - Private Cloud
 - Hybrid Cloud
- **Service Models:**
 - IaaS (Infrastructure as a Service) → Amazon EC2
 - PaaS (Platform as a Service) → AWS Elastic Beanstalk
 - SaaS (Software as a Service) → Amazon WorkSpaces, AWS Chime

Skills in:

- Identifying which service or deployment model fits a specific business need
- Explaining differences among IaaS, PaaS, and SaaS

☒ **Summary Table:**

Topic Area	What to Focus On
Cloud Benefits	Scalability, elasticity, agility, cost savings
Global Infrastructure	Regions, AZs, Edge Locations
Design Principles	6 AWS design principles
Economics	CapEx vs OpEx, TCO, cost optimization
Cloud Models	IaaS, PaaS, SaaS, Public, Private, Hybrid
Well-Architected Framework	5 Pillars: Operational Excellence, Security, Reliability, Performance, Cost Optimization
